

## Pulsed Shortwave Therapy Overview

RecoveryRx® and Smart Insole™ deliver the same pulsed electromagnetic therapy used for decades by physicians, therapists and athletic trainers worldwide to reduce pain and swelling and accelerate healing. The current treatments are expensive and inconvenient for most patients. Now, through this microchip technology, this hospital strength therapy is available in a convenient and easy to use, low-cost device.

## How this Technology Works

### Injured Tissue

When an injury occurs, cells separate and swelling starts to develop in the injured tissues which causes pain. Therefore, a reduction in tissue swelling "inflammation" reduces pain and allows injuries to heal.

### Restored Healthy Tissue

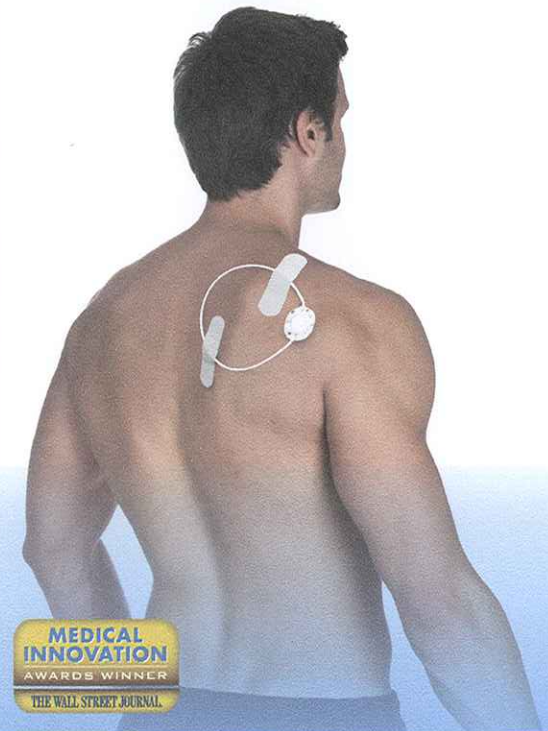

Pulsed shortwave therapy accelerates injury recovery by increasing blood flow and reducing swelling. A safe form of energy to the injured cells, which is used by the cells to recover and reduce inflammation, therefore results in a decrease in pain and accelerated tissue repair.
