

# Chiropractic Vibration Therapy

"The positive effects of whole body vertical vibration are abundantly known. Using the VibePlate makes adding vibration therapy to your office simple and professional."

## Patient Benefits

- Increase Circulation
- Reduce Joint Pain
- Increase Flexibility and Range of Motion
- Faster Healing
- Improve Balance
- Increase Bone Density
- More Energy

## Clinic Benefits

- Increase Reach of Practice
- Improve Patient Outcomes
- Takes Up Little Space
- Time Efficient Therapy Tool
- Bring in More Patients
- Revolutionary Form of Treatment
- Patients Can Use While Waiting

## HOW CHIROPRACTIC VIBRATION THERAPY WORKS

Your body depends on many mechanisms and structures to coordinate the transmission of vibrations and forceful impacts throughout your body. These mechanisms and structures — including synovial fluids, bone cartilage, joint kinematics, muscular activity and soft tissues — are the same ones that chiropractors manipulate and guide when applying chiropractic techniques.

By combining Whole Body Vibration and chiropractic models simultaneously, chiropractors can provide better results. Not only are they reinforcing the effectiveness of their own methods, but they're also accelerating pain relief and recovery from a wide range of neuromusculoskeletal disorders.

## CHIROPRACTIC VIBRATION MACHINE FOR RELIEF OF CHRONIC LOWER BACK PAIN

Chiropractic vibration therapy is proving to be especially helpful if you suffer from chronic lower back pain, a common complaint heard by chiropractors. Lower back pain is also one of the most frustrating conditions to treat since many cases do not respond to traditional medicine.

A chiropractic approach to lower back pain involves a complete assessment of the patient's medical history and musculoskeletal system. This helps the chiropractor determine whether the pain results from postural deficiencies, spinal misalignment, subluxation, lifestyle issues or a merger of all possible health problems.

Chiropractic vibration therapy improves upon manipulation and adjustments, traction, and therapeutic massage techniques by gently forcing your muscles to contract and relax repeatedly. Your muscles and bones initiate a corresponding response to electrical stimulation by stimulating muscle fibers, muscle cells and nerves, and increasing blood oxygenation through vasodilation. In addition, chiropractic vibration therapy is also capable of improving the health of deeper stabilizing and postural muscles — such as pelvic floor muscles, spinal erector muscles and transverse abdominal muscles — that are difficult for chiropractors to reach.

Since Whole Body Vibration platforms can change frequencies of muscle contractions, using a combination of WBV and chiropractic methods places less stress on ligaments, joints and supportive tissues.

"VibePlate is an integral part of rehab and reconditioning programs with acute and chronic patients."

### River Park South Chiropractic, Manitoba

"I've been using the VibePlate® daily for almost a year now and I have to say that we are getting results faster than ever before. For example: Last week we were able to help reduce a 26 degree scoliosis down to 6 degrees in only 4 weeks! This would not have been possible without the VibePlate®. The VibePlate® is the best option out there for patients that need specific neuromuscular re-education."
